

## Product Description

ECOCLEAN Self-Cleaning Glass is a water based, single component, transparent, nano-titanium dioxide photocatalyst coating that utilises natural sunlight and rain to perform self-cleaning of the external surfaces. (Previously known as ecotio<sub>2</sub><sup>®</sup> Sealer E10 / ecotio<sub>2</sub><sup>®</sup> Premium G)

## Intended Uses

Specifically designed for use on high end commercial and residential, education assets, retail outlets and showrooms, leisure and solar where superior appearance and reduced maintenance costs are important. Suitable substrates include glass (windows, fencing, glass roofing and balconies), solar panels, stainless steel and mirrors.

Developed for superior transparency and high photocatalyst activity. ECOCLEAN Self-Cleaning Glass is applied directly to clean substrate imparting multiple benefits including self-cleaning, air purifying, deodorising, anti-fungal and anti-bacterial and anti-static to substrates listed above. On Solar Panels, the major benefit of the self-cleaning property is extra power generation. The ECOCLEAN coated surface is photo oxidising when exposed to daylight, so will neutralise organic pollutants, soot, oils and smog that collide or deposit on this coated surface. Organic growths such as mould and black algae streaking will be inhibited.

The use of ECOCLEAN Self-Cleaning Glass keeps the exterior looking clean, significantly reduces use of cleaning chemicals and water (improved sustainability), reduces the life cycle cleaning costs, and improves health and safety by greatly reducing the need for personnel to assess externals of structures for maintenance.

## Practical Information

Product Code	C031G
Colour	Clear liquid and highly transparent when dry
Gloss	Not applicable
Theoretical Coverage	15-25 g/m <sup>2</sup>
Method of Application	HVLP Spray
Flash Point	Not applicable as water based
VOC	<1 g/lit
Density	1.0 kg/m <sup>3</sup>

Drying Time		Overcoating interval with self	
Temperature	Touch Dry	Minimum	Maximum
20°C (68°F)	20 mins	20 mins**	N/A

\*Practical coverage, above, is based on 30% loss factor using HVLP spray equipment, but loss factors are dependent on many influences including weather conditions, porosity of substrate, application method and parameters, skill of applicator etc. \*\*see application guide.

## Surface Preparation

Rinse area with clean water. Add a small amount of cleaner (ECOCLEAN Glass Treatment - T012G) and in combination with orbital sander (fitted with aluminium non-abrasive pad or similar), carefully remove all hydrophobic containments. Then thoroughly rinse off with clean water. (Note: too much cleaner will make removal more difficult).

The surface must be 100% hydrophilic, so repeat the cleaning steps above until there are no more visible hydrophobic containments and the water runs off the glass in a uniform manner.

**NOTE:** Cleaning the inside of the glass assists in visible checks on exterior cleanliness.

## Application

### Spray Equipment

HVLP spray equipment with a fine tip is the preferred for thin film control and to minimise loss factors. Tip size between 0.3mm to 0.5mm as viscosity of products is that of water. Do **NOT** thin. Application by airless spray equipment, brush and roller are not suitable for application of ECOCLEAN Self-Cleaning Glass as the product needs to be applied evenly and not have runs or high areas to have superior transparency. Care should be taken not to apply a too heavy coat in a single pass to prevent runs and overbuild. Avoid spraying in high wind or on rain effected wet surfaces or when rain is expected within 6 hours.

### Work Stoppages

Do not allow material to remain in hoses, guns or spray equipment for extended periods. Thoroughly flush all equipment with clean water.

### Clean Up

Clean all equipment immediately after use with clean water. Use clean water only. All surplus materials and empty containers should be disposed of in accordance with appropriate regional regulations/legislation.

## Product Characteristics

This technical datasheet provides general guidance on the use of ECOCLEAN Self-Cleaning Glass. Specific project requirements will be dependent upon the substrate type, substrate condition, service end use and environmental conditions. Always consult ECOCLEAN to confirm that ECOCLEAN Self-Cleaning Glass is suitable for the intended end use. Refer to care and maintenance procedure if the substrate requires cleaning. Especially, do not clean with ionic detergent, chemicals or by using any abrasive products.

### Storage

Products should be stored in their sealed containers until use. When products are on site store in a cool place in the shade. Store excess products in an air-conditioned environment regulated between 5-25°C. Do not return excess products to container, measure out what you require and dispense only what is required for the job at hand. Do not freeze or refrigerate below 5°C.

## Systems Compatibility

ECOCLEAN Self-Cleaning Glass should be applied directly to a freshly cleaned substrate. Suitable surface cleaners include:

- ECOCLEAN Glass Treatment

Please refer to specific TDS for more information of the above product or contact ECOCLEAN for more information.

## Safety Precautions

This product is intended for use only by professional applicators in industrial situations in accordance with the advice given on this sheet, the Safety Data Sheet and the container(s) and should not be used without reference to the Safety Data Sheet (SDS) which are available on request. Ensure you contact our ECOCLEAN team if you require any information before starting application.

## Additional Information

**Shelf Life:** 12 months when stored in dark or low light conditions between 5-25°C (ideally this product should be stored in an air-conditioned environment).

---

**Pack Size:** 10 kg pack

---

---

**Shipping Weight (typical):** 10.5 kg

---
